## Background

Changes in Australian Accounting Standards and the Conceptual Framework for Financial Reporting (the Conceptual Framework), which superseded the Framework for the Preparation and Presentation of Financial Statements (the Framework) on January 1, 2020 require changes to existing teaching practices for the Accounting and Finance General Year 12 course.

Key changes are:

- the qualitative characteristics of financial information
- the treatment of discount allowed and discount received
- the classification of financial expenses.

Details of these changes are outlined below.

## Qualitative characteristics of financial information

The Conceptual Framework outlines the concepts that underpin the preparation and presentation of financial statements for external users. The Conceptual Framework also outlines and defines the fundamental and enhancing characteristics of useful financial information. These characteristics, while not specific content in the Accounting and Finance General syllabus, apply to all financial information produced in financial reports.

| Current qualitative characteristics | Former qualitative characteristics |
| :---: | :---: |
| Fundamental qualitative characteristics <br> - relevance <br> - materiality <br> - faithful representation <br> Enhancing qualitative characteristics <br> - comparability <br> - verifiability <br> - timeliness <br> - understandability | Principal qualitative characteristics <br> - relevance <br> - reliability <br> - comparability <br> - understandability |

## Treatment of discounts allowed and received

The following extracts from Australian Accounting Standards specify how discounts should be treated.

## AASB118 Revenue, paragraph 10

'The amount of revenue arising on a transaction is usually determined by agreement between the entity and the buyer or user of the asset. It is measured at the fair value of the consideration received or receivable taking into account the amount of any trade discounts and volume rebates allowed by the entity.'

## AASB102 Inventories, paragraph 11

'The costs of purchase of inventories comprise the purchase price, import duties and other taxes (other than those subsequently recoverable by the entity from the taxing authorities), and transport, handling and other costs directly attributable to the acquisition of finished goods, materials and services. Trade discounts, rebates and other similar items are deducted in determining the costs of purchase.'

The Australian Accounting Standards require discounts to form part of the calculation of net sales and cost of sales and hence the calculation of gross profit, as follows:

- $\quad$ Net sales $=$ sales - sales returns - discount allowed
- Total cost of sales = cost of sales + import duties + cartage/freight inwards - discount received

This impacts on the preparation of an income statement and the profit, gross profit and expense ratios. There is no change required for the recording of discounts in the general ledger or the general journal.

## Financial expenses

For the purposes of Accounting and Finance General Year 12, Financial Expenses will include only borrowing costs. The Australian Accounting Standards defines borrowing costs as:

## AASB123 Borrowing Costs, paragraph 5

'Borrowing costs are interest and other costs that an entity incurs in connection with the borrowing of funds.'

The impacts on the classification of bad debts in the income statement which should now be treated as a selling expense.

The example on pages 3-7 shows:

- an income statement (using both the new report layout and the former report layout)
- a balance sheet (showing that there is no change to the report as a result of these changes)
- the profitability ratios affected by these changes, i.e. profit ratio, gross profit ratio and expense ratio (calculation of these ratios is not required in this course, only interpretation of the ratios).

## Example

This example demonstrates the:

- preparation of an income statement for the year ended 30 June, 2017
- preparation of a balance sheet as at 30 June, 2017
- profitability ratios as at 30 June, 2017.
