HEALTH STUDIES

ATAR COURSE

Year 11 syllabus

IMPORTANT INFORMATION

This syllabus is effective from 1 January 2015.

Users of this syllabus are responsible for checking its currency.

Syllabuses are formally reviewed by the School Curriculum and Standards Authority on a cyclical basis, typically every five years.

Rationale

The Health Studies ATAR course focuses on the study of health as a dynamic quality of human life. Students undertaking this course develop the knowledge, understanding and skills necessary to promote an understanding of the importance of personal and community action in promoting health.

The influence of social, environmental, economic and biomedical determinants of health is a key focus of the course. Other course content includes the influence of beliefs, attitudes and values on health behaviour, and the importance of self-management and interpersonal skills in making healthy decisions.

Using an inquiry process, students draw on their knowledge and understandings of health concepts and investigate health issues of interest. Through this process, they develop research skills that can be applied to a range of health issues or concerns.

This course will prepare students for career and employment pathways in a range of health and community service industries. Students will have the opportunity to develop key employability and life skills, including communication, leadership, initiative and enterprise. Inquiry skills will equip students to adapt to current and future studies and work environments.

Course outcomes

The Health Studies ATAR course is designed to facilitate achievement of the following outcomes.

Outcome 1 – Knowledge and understandings

Students understand factors and actions that influence health.

In achieving this outcome, students:

- understand the determinants of health
- understand actions and strategies that influence health
- understand and apply frameworks, models and theories to explain health concepts.

Outcome 2 – Beliefs, attitudes and values

Students understand the influence of beliefs, attitudes, values and norms on health behaviour.

In achieving this outcome, students:

- understand the relationship between beliefs, attitudes, values and health behaviour
- understand the influence of attitudes and values on health behaviour
- understand the range of factors influencing beliefs, attitudes, values and norms.

Outcome 3 – Self-management and interpersonal skills

Students use self-management and interpersonal skills to promote health.

In achieving this outcome, students:

- apply self-understanding and decision-making skills
- apply communication and cooperation skills.

Outcome 4 – Health inquiry

Students use inquiry skills and processes to investigate and respond to health issues.

In achieving this outcome, students:

- plan a health inquiry to define and research a health issue
- use a range of information to explore a health issue
- interpret information to develop a response to the health issue
- present findings and link the investigation to the response.

Organisation

This course is organised into a Year 11 syllabus and a Year 12 syllabus. The cognitive complexity of the syllabus content increases from Year 11 to Year 12.

Structure of the syllabus

The Year 11 syllabus is divided into two units, each of one semester duration, which are typically delivered as a pair. The notional time for each unit is 55 class contact hours.

Unit 1

This unit focuses on the health of individuals and communities. Students learn about health determinants and their impact on health. Health promotion is explored and used as a framework for designing approaches to improve health. Students examine attitudes, beliefs and norms and their impact on decision-making, and develop a range of key health skills. Students extend their understandings of factors influencing health, and actions and strategies to protect and promote health through inquiry processes.

Unit 2

This unit focuses on the impact of factors influencing the health of communities. Students learn about community development and how community participation can improve health outcomes. Students examine the influence of attitudes, beliefs, and norms on community health behaviours; apply investigative and inquiry processes to analyse issues influencing the health of communities; and develop appropriate responses. The impact of technology on interpersonal skills and strategies for managing such influences are also a focus.

Each unit includes:

- a unit description – a short description of the focus of the unit
- unit content – the content to be taught and learned.

Organisation of content

For each unit, the content is organised as follows:

Content organisers	Sub-organisers
Health concepts	Holistic health
	Principles, frameworks, models and theories
	Actions and strategies
	Consumer health
Attitudinal and environmental influences	Beliefs, attitudes and values
	Social and cultural norms
Skills and processes	Self-management skills
	Interpersonal skills
	Health inquiry

Progression from the Year 7–10 curriculum

The Health Studies ATAR course continues to develop student learning around the knowledge, understandings and skills within the P–10 Health and Physical Education curriculum. Content within the Personal, social and community health strand, and associated substrands, is consolidated and extended through the study of the course units.

Representation of the general capabilities

The general capabilities encompass the knowledge, skills, behaviours and dispositions that will assist students to live and work successfully in the twenty-first century. Teachers may find opportunities to incorporate the capabilities into the teaching and learning program for the Health Studies ATAR course. The general capabilities are not assessed unless they are identified within the specified unit content.

Literacy

The course assists in the development of literacy by introducing specific terminology used in health contexts. Students learn and apply language used to describe factors influencing health, health status, and health-related frameworks, models and theories. They develop critical health consumer skills to assist them to access, read, interpret, understand and evaluate health information and navigate the healthcare system. They consolidate and develop communication skills to effectively operate in personal and group situations through participation in a range of practical and collaborative activities.

Numeracy

Students develop data analysis skills as they apply inquiry processes to investigate health issues. Students interpret and analyse health information, identifying patterns and relationships in data to consider trends, draw conclusions and make recommendations which inform health behaviour and practices.

Information and communication technology capability

The course enhances information and communication technology (ICT) learning by supporting students to effectively and safely access online health information and services to manage their own health and wellbeing. Students are encouraged to apply practices that comply with legal obligations as they locate, generate and access information, and select and evaluate data for research activities. Health information in online environments is expansive and originates from a diverse range of credible and less credible sources. Students develop and apply targeted search techniques and skills to assess the suitability and relevance of information.

Critical and creative thinking

Students learn to collect, analyse and organise information as they investigate risk and protective factors. They scrutinise information and put ideas into action through the creation and implementation of health promotion actions and strategies designed to improve personal and community health outcomes. Students apply problem-solving techniques and negotiate solutions in a range of situations and environments. They also reflect on their own and others' actions as they evaluate factors which influence health-related decisions.

Personal and social capability

The development of self-awareness, self-management, social awareness and social management are key features within the course. Students learn to recognise and reflect on their emotional responses as they embark on developing self-management, decision-making and interpersonal skills. Reflection is used as a means of identifying personal strengths and building on these, and determining successful strategies to address barriers and enablers to health. Students develop and refine communication skills, work independently and collaboratively, and use initiative to overcome barriers and achieve success. Students build resilience and develop productive coping strategies which support them to be adaptable to changing personal and social circumstances. Through the study of health promotion strategies to address health priorities, students investigate how they and others can make positive contributions to the health of communities.

Ethical understanding

Personal and social attitudes and values are important influences on health-related decisions. Students examine the role of attitudes and values and how they affect lifestyle choices as either barriers or enablers. Students consider how values, beliefs and differing interpretations of health information influence ethical understandings and contribute to disparities in health between populations.

Intercultural understanding

Cultural attitudes and perspectives are important influences on health and wellbeing. While reviewing factors affecting health and designing health promotion initiatives, students examine the complexities of culture and its impact on beliefs and practices.

Representation of the cross-curriculum priorities

The cross-curriculum priorities address contemporary issues which students face in a globalised world. Teachers may find opportunities to incorporate the priorities into the teaching and learning program for the Health Studies ATAR course. The cross-curriculum priorities are not assessed unless they are identified within the specified unit content.

Aboriginal and Torres Strait Islander histories and cultures

Through the study of relevant contexts, opportunities will allow for the development of students' understanding and appreciation of the diversity of Aboriginal and Torres Strait Islander Peoples' histories and cultures. For example, students learn about the importance of family and kinship structures for maintaining and promoting health, safety and wellbeing as they study determinants that influence personal and community health.

Asia and Australia's engagement with Asia

In this course, students engage with diverse cultures, traditions and belief systems and develop self-management and interpersonal skills that reflect cultural understanding, empathy and respect.

Sustainability

In this course, students explore how they connect and interact with environments and people in different social and cultural groups within personal networks and the wider community. They consider how these connections contribute to the creation of supportive environments in which healthy choices are made easier. Students explore factors influencing health, including the role of natural and built environments in supporting health-related decisions and behaviours.

Unit 1

Unit description

The focus of this unit is the health of individuals and communities. Students learn about the significance of determinants and how these raise or lower the health of individuals and communities. Health promotion is explored and used as a framework for designing approaches to improve health. Students examine personal and popular attitudes and beliefs and their impact on decision making, and develop self-management, interpersonal and key consumer health skills. Students extend their understandings of factors influencing health, and actions and strategies to protect and promote health, through investigation and inquiry processes.

Unit content

This unit includes the knowledge, understandings and skills described below.

Health concepts

Holistic health

- determinants of health
 - social
 - the social gradient
 - stress
 - early life
 - social exclusion
 - work
 - unemployment
 - social support
 - addiction
 - food
 - transport
 - culture
 - environmental
 - features of the natural and built environment
 - geographical location
 - socioeconomic
 - education
 - employment
 - income
 - family
 - housing/neighbourhood
 - access to services
 - migration/refugee status
 - food security
 - biomedical
 - birth weight
 - body weight

Principles, frameworks, models and theories

- definition of health promotion
- purpose and elements of the *Ottawa Charter* for health promotion
- framework for health promotion, including:
 - focus (individuals, groups, populations)
 - strategies (educational, motivational, operational, economic, regulatory, technological)
 - impact (behavioural and environmental adaptations)
 - outcomes (better health)

Actions and strategies

- action areas of the *Ottawa Charter*
 - building healthy public policy
 - developing personal skills
 - creating supportive environments
 - strengthening community action
 - reorienting health services

Consumer health

- definition of, and skills required for, health literacy
 - accessing, reading and comprehending health information
 - engaging in self-care and disease management
- factors influencing the use of health products and services
 - media
 - transport
 - cost
 - consumer confidence

Attitudinal and environmental influences

Beliefs, attitudes and values

- relationship between beliefs, attitudes, values and health behaviour
- influence of media, social networking, advertising and marketing on beliefs, attitudes and values
- purpose and elements of the Health Belief Model
 - perceived susceptibility
 - perceived severity
 - perceived barriers
 - perceived benefits
 - cues to action
 - self-efficacy

Social and cultural norms

- definitions of social and cultural norms

Skills and processes

Self-management skills

- coping skills and strategies
 - stress management
 - accessing support
 - time management

Interpersonal skills

- skills required for working effectively with individuals and groups
 - negotiation
 - conflict resolution
 - mediation
 - leadership
- influence of introvert and extrovert personality styles on communication

Health inquiry

- planning a health inquiry
 - identification and description of a health issue
 - development of focus questions to research a health issue
- use of a range of information to explore a health issue
 - identification and use of a range of reliable information sources
 - identification and application of criteria for selecting information sources
- interpretation of information
 - summary of information
 - identification of trends and patterns in data
 - development of argument
 - development of general conclusions
- presentation of findings in appropriate format to suit audience

Unit 2

Unit description

The focus of this unit is the impact of a broad range of factors influencing the health of communities. Students are introduced to the concept of community development and the importance of strengthening communities through participative means where people are at the centre of health promotion action. Key health priority areas which commonly influence the health of communities and comprehensive approaches to achieving greater equity in health are studied. Students learn about measures of health, preventive strategies and examine a range of emerging ethical issues arising from contemporary health practices. The influence of beliefs, attitudes, values and norms on health behaviour is further explored, and students continue to extend their understanding of the impact of key issues influencing the health of communities through the development and application of investigative and inquiry approaches.

Unit content

This unit builds on the content covered in Unit 1.

This unit includes the knowledge, understandings and skills described below.

Health concepts

Holistic health

- impact on personal and community health status of social, environmental, socioeconomic and biomedical determinants of health

Principles, frameworks, models and theories

- definition and purpose of community development
- community development principles
 - sustainability
 - diversity
 - social justice
 - human rights
 - addressing disadvantage
 - valuing local culture, knowledge, skills and resources
- relationship between participation and empowerment in community development
- levels of participation in community development
 - information
 - consultation
 - joint decision making
 - acting together
 - supporting community interests
- purpose and elements of the Jakarta Declaration on Health Promotion
- purpose of the National Strategic Framework for Chronic Conditions

Actions and strategies

- role and measures of epidemiology
 - mortality
 - morbidity
 - life expectancy
 - incidence and prevalence of disease
 - burden of disease
- preventive strategies to maintain, avoid and manage risk for personal and community health
 - screening
 - immunisation
 - health education
- primary, secondary and tertiary prevention

Consumer health

- ethical issues arising from contemporary health practices
 - organ and tissue donation
 - in-vitro fertilisation
 - stem cells
 - genetically modified foods

Attitudinal and environmental influences

Beliefs, attitudes and values

- use of social marketing
 - definition and purpose
 - product, price, place, promotion
 - examples of health-related social marketing

Social and cultural norms

- influence of the media on social norms and health behaviour

Skills and processes

Self-management skills

- definition of and competencies for Emotional Intelligence
 - self-awareness
 - self-regulation
 - self-motivation
 - social awareness
 - social skills

Interpersonal skills

- characteristics and appropriate use of autocratic, democratic and laissez-faire leadership styles

Health inquiry

- planning a health inquiry
 - identification and description of a health issue
 - development of focus questions to research a health issue
- use of a range of information to explore a health issue
 - identification and use of a range of reliable information sources
 - identification and application of criteria for selecting information sources
- interpretation of information
 - summary of information
 - identification of trends and patterns in data
 - development of argument
 - development of general conclusions
- presentation of findings in appropriate format to suit audience

School-based assessment

The Western Australian Certificate of Education (WACE) Manual contains essential information on principles, policies and procedures for school-based assessment that needs to be read in conjunction with this syllabus.

Teachers design school-based assessment tasks to meet the needs of students. The table below provides details of the assessment types for the Health Studies ATAR Year 11 syllabus and the weighting for each assessment type.

Assessment table – Year 11

Type of assessment	Weighting
<p>Inquiry</p> <p>Students plan, conduct and communicate the findings of a health inquiry.</p> <p>Evidence can include: oral and/or written reports, posters and/or wall charts, websites, PowerPoint presentations, debates, articles for publication, and/or any combination of these.</p>	20%
<p>Project</p> <p>Students explore ideas and manage the components of the task.</p> <p>Evidence can include: reports, displays, health fairs/expos, demonstrations, campaigns, merchandise (production or design), pamphlets, brochures, fact sheets, newsletters, web pages and/or any combination of these.</p>	30%
<p>Response</p> <p>Students apply knowledge and skills to analyse and respond to stimuli or prompts that can include: scenarios, diagrams, graphs, tables, media excerpts/scripts, photos and/or health promotion resources.</p> <p>Evidence can include: tests, in-class essays and/or responses to a specific stimulus.</p>	20%
<p>Examination</p> <p>Typically conducted at the end of each semester and/or unit. In preparation for Unit 3 and Unit 4, the examination should reflect the examination design brief included in the ATAR Year 12 syllabus for this course.</p>	30%

Teachers are required to use the assessment table to develop an assessment outline for the pair of units (or for a single unit where only one is being studied).

The assessment outline must:

- include a set of assessment tasks
- include a general description of each task
- indicate the unit content to be assessed
- indicate a weighting for each task and each assessment type
- include the approximate timing of each task (for example, the week the task is conducted, or the issue and submission dates for an extended task).

In the assessment outline for the pair of units, each assessment type must be included at least twice. In the assessment outline where a single unit is being studied, each assessment type must be included at least once.

The set of assessment tasks must provide a representative sampling of the content for Unit 1 and Unit 2.

Assessment tasks not administered under test/controlled conditions require appropriate validation/authentication processes. For example, student performance for a health inquiry could be validated by a task (such as a structured essay or extended response) which is completed in class after the assessment is submitted.

Grading

Schools report student achievement in terms of the following grades:

Grade	Interpretation
A	Excellent achievement
B	High achievement
C	Satisfactory achievement
D	Limited achievement
E	Very low achievement

The teacher prepares a ranked list and assigns the student a grade for the pair of units (or for a unit where only one unit is being studied). The grade is based on the student's overall performance as judged by reference to a set of pre-determined standards. These standards are defined by grade descriptions and annotated work samples. The grade descriptions for the Health Studies ATAR Year 11 syllabus are provided in Appendix 1. They can also be accessed, together with annotated work samples, through the Guide to Grades link on the course page of the Authority website at www.scsa.wa.edu.au

To be assigned a grade, a student must have had the opportunity to complete the education program, including the assessment program (unless the school accepts that there are exceptional and justifiable circumstances).

Refer to the WACE Manual for further information about the use of a ranked list in the process of assigning grades.

Appendix 1 – Grade descriptions Year 11

A	<p>Health concepts</p> <p>Provides clear and coherent explanations of the impact of health determinants, principles and frameworks, and a range of appropriate actions and strategies to avoid or reduce risks to health.</p> <p>Provides clear and coherent explanations of multiple influences shaping beliefs, attitudes and values, and describes the complexities of their relationship to health behaviour using appropriate examples.</p> <p>Identifies and evaluates factors influencing access to and use of healthcare.</p>
	<p>Skills</p> <p>Clearly identifies appropriate health decisions and strategies and applies them effectively to different situations.</p>
	<p>Health inquiry</p> <p>Independently produces research questions.</p> <p>Consistently uses a wide range of reliable and relevant sources of information; clearly and accurately analyses and interprets evidence to develop a valid argument; presents information in well-structured ways using appropriate health language and relevant supporting examples.</p>
B	<p>Health concepts</p> <p>Provides clear explanations of the impact of health determinants, principles and frameworks, and actions and strategies to avoid or reduce risks to health.</p> <p>Provides clear explanations of overt influences shaping beliefs, attitudes and values, and describes their relationship to health behaviour using some appropriate examples.</p> <p>Identifies factors influencing access to and use of healthcare.</p>
	<p>Skills</p> <p>Identifies appropriate health decisions and strategies and effectively applies them to familiar situations.</p>
	<p>Health inquiry</p> <p>Independently produces simple research questions.</p> <p>Uses a number of reliable and relevant sources of information; interprets evidence to develop a mostly valid argument; presents information in structured ways using appropriate health language and some relevant examples.</p>
C	<p>Health concepts</p> <p>Provides generalised explanations of the impact of health determinants, principles and frameworks, and simple actions and strategies to avoid or reduce risks to health.</p> <p>Provides generalised explanations of influences shaping beliefs, attitudes and values, and describes their relationship to health behaviour in simple ways using some simple examples.</p> <p>Identifies general factors influencing access to and use of healthcare.</p>
	<p>Skills</p> <p>Identifies some appropriate health decisions and strategies and applies them to familiar situations.</p>
	<p>Health inquiry</p> <p>With guidance, produces mostly relevant focus questions.</p> <p>Uses mostly reliable and relevant sources of information; interprets and/or summarises information in simple ways using basic but appropriate health language and limited examples.</p>

D**Health concepts**

Provides basic explanations of health determinants, principles and frameworks, and few actions or strategies to avoid or reduce risks to health.

Provides basic explanations of influences shaping beliefs, attitudes and values, and describes their relationship to health behaviour in simple terms.

Provides basic explanations of factors influencing access to and use of healthcare.

Skills

Identifies and inconsistently applies a limited number of appropriate health decisions and strategies.

Health inquiry

With guidance, produces simple focus questions.

Uses minimal sources of information; makes limited attempts to summarise and/or interpret evidence; typically presents information in simple ways that often lack clarity.

E

Does not meet the requirements of a D grade and/or has completed insufficient assessment tasks to be assigned a higher grade.
