Sample course outline

Human Biology – ATAR Year 12

Unit 3 and Unit 4

Semester 1 – Homeostasis and disease

Science Inquiry Skills

Science Inquiry Skills align with the Science Understanding and Science as a Human Endeavour content of the unit and are integrated into the learning experiences.

Week	Key teaching points
1–2	<p>Endocrine system</p> <ul style="list-style-type: none"> • Endocrine glands <ul style="list-style-type: none"> ▪ location of endocrine glands - hypothalamus, pituitary, thyroid, parathyroid, pancreas, thymus, gonads, pineal and adrenal glands ▪ specific target organs and action of hormones secreted from endocrine glands - hypothalamus, pituitary, thyroid, parathyroid, pancreas and adrenal glands ▪ hypothalamic control of pituitary gland • Hormones <ul style="list-style-type: none"> ▪ types of hormones <ul style="list-style-type: none"> ○ water-soluble ○ lipid-soluble ▪ synthetic hormones <ul style="list-style-type: none"> ○ development using recombinant DNA ○ for treatment of endocrine dysfunctions – diabetes mellitus, hypothyroidism and hyperthyroidism <p>Commence Task 1: Extended response - Recombinant DNA technology and its uses</p>
3	<p>Central and peripheral nervous system</p> <ul style="list-style-type: none"> • Division of the nervous system <ul style="list-style-type: none"> ▪ Central nervous system <ul style="list-style-type: none"> ○ Structure and function of the CNS – cerebellum, cerebrum, medulla oblongata, hypothalamus, corpus callosum, spinal cord, meninges and cerebrospinal fluid • Practical activity – Brain dissection <ul style="list-style-type: none"> ▪ Peripheral nervous system <ul style="list-style-type: none"> ○ Autonomic and somatic ○ Sympathetic and parasympathetic ○ Afferent and efferent
4–5	<p>Task 1: Extended response - Recombinant DNA technology and its uses</p> <ul style="list-style-type: none"> • Receptors <ul style="list-style-type: none"> ▪ Function of thermoreceptors, osmoreceptors, chemoreceptors, touch and pain Practical activity – Perception of stimuli • Neurons <ul style="list-style-type: none"> ▪ Structure and function of neurons – sensory, motor and interneuron ▪ Transmission of nerve impulses ▪ Reflex arc Practical activity – Reflexes
6	<ul style="list-style-type: none"> • Nervous system disorders <ul style="list-style-type: none"> ▪ Cell replacement therapy for treatment Alzheimer’s and Parkinson’s • Comparison of the endocrine and nervous systems <ul style="list-style-type: none"> ▪ Speed of action ▪ Duration of action ▪ Nature and transmission of the message

Week	Key teaching points
	<ul style="list-style-type: none"> ▪ Specificity of message Task 2: Test – Endocrine and nervous systems
7–8	Homeostasis <ul style="list-style-type: none"> • Need for homeostasis • Negative feedback/stimulus response models • Thermoregulation <ul style="list-style-type: none"> ▪ Methods of heat loss and gain <ul style="list-style-type: none"> ○ Metabolic activity ○ Conduction, convection, radiation ○ Evaporation ▪ Methods of controlling heat loss and gain <ul style="list-style-type: none"> ○ Physiological – vasoconstriction, vasodilation, shivering, sweating ○ Behavioural ▪ Negative feedback/stimulus response model for thermoregulation Task 3: Science inquiry (practical) – Thermoregulation in the human body
9	<ul style="list-style-type: none"> • Regulation of blood sugar levels <ul style="list-style-type: none"> ▪ The liver <ul style="list-style-type: none"> ○ Glycogenesis ○ Glycogenolysis ○ Gluconeogenesis ▪ The pancreas <ul style="list-style-type: none"> ○ Insulin ○ Glucagon ▪ The adrenal glands <ul style="list-style-type: none"> ○ Glucocorticoids ○ Adrenaline and noradrenaline ▪ Negative feedback/stimulus response models for the regulation of blood sugar levels ▪ Treatment of diabetes mellitus, including synthetic hormones and gene therapy
10	<ul style="list-style-type: none"> • Regulation of body fluid concentrations <ul style="list-style-type: none"> ▪ Methods of water loss and gain ▪ ADH and Aldosterone ▪ Thirst reflex ▪ Negative feedback/stimulus response models for the regulation of water balance • Regulation of gas concentrations <ul style="list-style-type: none"> ▪ Negative feedback model for the control of breathing ▪ Voluntary control of breathing
11	Task 4: Test – Homeostasis Response to infection <ul style="list-style-type: none"> • Pathogens <ul style="list-style-type: none"> ▪ Types of pathogens - viruses and bacteria ▪ Transmission of pathogens <ul style="list-style-type: none"> ○ Direct and indirect contact ○ Transfer by body fluids ○ Disease-specific vectors ○ Contaminated food and water

Week	Key teaching points
12	<p>Task 5: Science inquiry (investigation) – Modelling the spread of pathogens</p> <ul style="list-style-type: none"> • External defence mechanisms against pathogens <ul style="list-style-type: none"> ▪ Skin ▪ Digestive tract ▪ Urogenital tract ▪ Respiratory system ▪ The ear ▪ The eye • Non-specific immune response <ul style="list-style-type: none"> ▪ Inflammation ▪ Fever
13	<ul style="list-style-type: none"> • Specific immune responses <ul style="list-style-type: none"> ▪ antibody-mediated immunity ▪ cell-mediated immunity • Treatment and prevention of pathogen induced infections <ul style="list-style-type: none"> ▪ Antiviral drugs <ul style="list-style-type: none"> ○ Mode of action ▪ Antibiotic drugs <ul style="list-style-type: none"> ○ Mode of action ▪ Vaccines <ul style="list-style-type: none"> ○ Types ○ Mode of action ○ Production, including the use of recombinant DNA • Immunity <ul style="list-style-type: none"> ▪ passive and active immunity ▪ herd immunity ▪ immunisation <ul style="list-style-type: none"> ○ social influences on immunisation programs ○ economic influences on immunisation programs ○ cultural influences on immunisation programs
14	Revision
15	Task 6: Examination – Semester 1

Semester 2 – Human variation and evolution

Science Inquiry Skills

Science Inquiry Skills align with the Science Understanding and Science as a Human Endeavour content of the unit and are integrated into the learning experiences.

Week	Key teaching points
1	<p>Mutations</p> <ul style="list-style-type: none"> • Causes of gene and chromosomal mutations <ul style="list-style-type: none"> ▪ DNA replication ▪ Cell division ▪ Mutagens • Mutations can be favourable or unfavourable for survival • Causes of variation <ul style="list-style-type: none"> ▪ Mutations introducing new alleles ▪ Environment influence on genotypes producing a variety of phenotypes
2–4	<p>Gene pools</p> <ul style="list-style-type: none"> • Gene pools and populations • Cause of changes to gene pools <ul style="list-style-type: none"> ▪ Mutations ▪ Selection pressures ▪ Random genetic drift, including founder effect ▪ Barriers to gene flow <p>Task 7: Science inquiry (practical) – Simulating changes to gene pools</p> <ul style="list-style-type: none"> • Effect of genetic diseases on gene pools <ul style="list-style-type: none"> ▪ Tay-Sachs disease ▪ Thalassaemia ▪ Sickle-cell anaemia <p>Practical activity – Genetic diseases and changing gene pools</p>
5–6	<ul style="list-style-type: none"> • Natural selection <ul style="list-style-type: none"> ▪ Mechanisms underpinning evolution by natural selection <ul style="list-style-type: none"> ○ Variation ○ Isolation ○ Struggle for existence ○ Selection ○ Speciation <p>Practical activity – Natural selection</p> <p>Task 8: Extended response – Natural selection in humans</p> <p>Task 9: Test – Mutations and gene pools</p>
7–8	<p>Evidence for evolution</p> <ul style="list-style-type: none"> • Comparative biochemistry <ul style="list-style-type: none"> ▪ DNA (genomic and mitochondrial) and proteins <ul style="list-style-type: none"> ○ Biotechnological techniques used to facilitate DNA sequencing <ul style="list-style-type: none"> – Polymerase chain reaction (PCR) – denaturing, annealing, elongation – Bacterial enzymes – Gel electrophoresis ○ Ethical considerations for interpretation and use of genetic information <p>Practical activity – Gel electrophoresis</p>
9	<ul style="list-style-type: none"> • Comparative anatomy <ul style="list-style-type: none"> ▪ Homologous structures ▪ Embryology ▪ Vestigial structures <p>Practical activity: Comparative anatomy</p>

Week	Key teaching points
10	<ul style="list-style-type: none"> • Bioinformatics • Phylogenetic trees <p>Task 10: Science inquiry (practical) – Our close relations</p>
11	<ul style="list-style-type: none"> • Fossils <ul style="list-style-type: none"> ▪ Fossil formation ▪ Problems and limitations of the fossil record ▪ Application and limitations of dating methods <ul style="list-style-type: none"> ○ relative dating techniques – stratigraphy and index fossils ○ absolute dating techniques – radio-carbon and potassium-argon <p>Practical activity – Dating fossils</p>
12–14	<p>Hominid evolutionary trends</p> <ul style="list-style-type: none"> • Classification of humans and great apes • Differences between humans and great apes <ul style="list-style-type: none"> ▪ relative size of cerebral cortex ▪ mobility of digits ▪ locomotion ▪ prognathism and dentition <p>Practical activity – Comparing apes and man</p> <ul style="list-style-type: none"> • Possible relatedness and evolutionary pathways <ul style="list-style-type: none"> ▪ <i>Australopithecus afarensis</i> ▪ <i>Australopithecus africanus</i> ▪ <i>Paranthropus robustus</i> ▪ <i>Homo habilis</i> ▪ <i>Homo erectus</i> ▪ <i>Homo neanderthalensis</i> ▪ <i>Homo sapiens</i> <p>Practical activity – Trends in Hominid skulls</p> <ul style="list-style-type: none"> • Tool cultures of <i>Homo habilis</i>, <i>Homo erectus</i>, <i>Homo neanderthalensis</i> and <i>Homo sapiens</i> <ul style="list-style-type: none"> ▪ Trends in manufacturing techniques and materials ▪ As evidence for cognitive evolution and lifestyle <p>Task 11: Test – Evidence for evolution and hominid evolutionary trends</p>
15	<p>Task 12: Examination – Semester 2</p>
